

Guidelines for Plastic Scrap: P-20252
Baled Recycled Plastic Scrap Commercial Guidelines

Bale Integrity

Bale integrity must be maintained through loading, shipping, handling, and storage. ~~Distorted or broken bales are difficult to handle. They are unacceptable and may result in downgrading, rejection, or charge back.~~

Allowable Contamination

Refer to each specification for allowable contamination levels. Unspecified materials must not exceed 2% of total bale weight. This can be changed if agreed upon in writing and signed by both the buyer and the seller. ~~Bales which contain over 2% will be subjected to reduction in the contracted price of the material as well as charges for disposal of the contaminants. The reduced percentage will vary depending upon the amount and type of contamination. Quality of the baled plastic is the primary factor which determines the value.~~
