

Can I Process This?

Stop and Check for Hazards

Look for Batteries

Batteries are nearly everywhere can catch fire or explode when crushed or damaged during processing.

Identify Compressed Gas Cylinders

Aerosol cans, propane tanks, and pressurized containers can explode when compacted, causing serious injuries and fires.

Separate Unknown Chemicals

Unmarked bottles and containers may contain hazardous chemicals that can create toxic fumes or dangerous reactions when mixed.

Why This Matters:

These items cause fires and explosions that put everyone at risk.

When in doubt, ask your supervisor for help.
